Ergonomic barcode scanners and efficient barcode systems allow for rapid data capture while ensuring electronic transfer of information into your existing systems. Slow manual counting and the risk of misinterpretation are eliminated, ensuring that your stock take is completed accurately and timeously.

How It Works

All your products and inventory are barcoded. In the event of them not being barcoded Big Inja will assist in the process

Your entire stock/inventory list is loaded onto mobile barcode scanner devices

Your bar code scanner/s are supplied to you loaded with all your requirements in the qty's you require

You count your inventory items during your stock take period by simply scanning product barcodes and entering qty's

Additional information can be added to each scan allowing you to fully qualify the take

Big Inja will then download the data from your scanner/s, perform back ups and statistical analysis and send you reports in a useful and friendly format
